

My Jewelry Repair Begins Construction on State-of-the-Art Watch Repair Facility Expansion

California, October 14th, 2019 – My Jewelry Repair (MJR) begins construction this week on a state-of-the-art watch repair facility expansion to its Californian location. When completed, the expansion will replace the existing watch service department, and will be over three times the original size.

The new facility will include expanded and dedicated rooms for quality watchmaking, including clean rooms, diagnostics and polishing departments. Areas where timepieces are opened, either for evaluation or service, will be ISO certified to prevent dust or other contaminants from entering any movement.

The new facility will be furnished with brand new benches, tools, diagnostic and testing equipment and will have substantial security measures that live up to My Jewelry Repair's safety and security reputation. Most importantly, the facility will be staffed with certified watchmakers with training from around the world.

The new watch service department will greatly increase the company's capacity to service timepieces to the absolute highest level, and further cement MyJewelryRepair.com as the gold standard for watch repair in the United States.

More on My Jewelry Repair

My Jewelry Repair has been in the jewelry repair and watch repair business for over 26 years. Many national retailers and Swiss watch manufacturers outsource work to My Jewelry Repair due to their bicoastal presence, not to mention their expertise and prowess within the jewelry and watch repair industry.

MyJewelryRepair.com is known to have the tooling and expertise to get any repair done, source genuine parts, and, should an original part be unavailable, have the certified watchmakers that can manufacture some parts on site if needed. They repair over half a million watches, rings, and other items of jewelry annually.

MyJewelryRepair.com boasts master jewelers and certified watchmakers who carry unique certifications and can repair any type of watch or piece of jewelry with a quick turnaround.
